April 6-8, 2008, International Asia Pacific Convention Center & HNA Resort, Sanya, Hainan, China

Humanized Systems are man-made systems that exhibit behavioral characteristics or have some analogous capabilities and functions of our human being. Rapid development of computer techniques, communication techniques, control techniques and intelligent techniques has greatly pushed the progress of humanized systems.

In this session, we will discuss current achievements and future directions of humanized systems. This session provides a forum for researchers to exchange their ideas and latest progress in the areas including but not limited to:

- Artificial Life
- Softman
- Artificial Emotion
- Humanized Information Processing
- Humanized Control Systems
- Intelligent communication and Network
- Distributed Artificial Intelligence
- Humanized Apparatus
- Humanized Management
- Multi-agent System
